# Case Study Report — Evaluation of Five Websites from a Web-Design & Planning Perspective

## Summary

This report evaluates five eCommerce websites from the attached file—primarily Indian platforms including Meesho, Tata CLiQ, Reliance Digital, Nykaa, and Ajio—using a consistent framework: Introduction, Brief history, Website & app design, Role of design in success, Drawbacks, and Conclusion for each site. The sites represent varied eCommerce goals like social reselling, premium shopping, electronics retail, beauty products, and budget marketplaces. Evaluations draw from the file's notes, expanded with contemporary design insights for comprehensive analysis.

## Meesho — https://www.meesho.com/

1. **Introduction**

Meesho is a social commerce and online shopping platform for budget-conscious shoppers across India, offering low-priced fashion, home, and lifestyle products. It especially targets tier-2 and tier-3 city users and small resellers who sell through messaging and social media.

2. **Brief History**

Meesho was founded in 2015 by Vidit Aatrey and Sanjeev Barnwal as a reseller-focused app that allowed individuals to sell products via social networks. During and after the pandemic, it scaled from pure reselling into a full marketplace model, expanding its supplier base and logistics to serve customers directly in smaller towns and cities.

3. **Website and App Design**

The website and app use a mobile-first layout with large product cards, strong price labels, and sections like “Budget Buys” and “Trending Now” to highlight affordability. Pink and purple accents with simple typography make discounts and offers stand out, while tabs for categories, orders, and account keep

navigation straightforward on small screens. Key UI features include one-tap sharing of products, easy cash-on-delivery checkout, and visible labels such as "Lowest Prices" and "7 Days Easy Return," which build confidence among new online shoppers.

4. **Role of Design in Success**

The simple, price-focused design helps first-time and budget users quickly find cheap products and share them within their social circles, which supports viral growth. Clear messaging about returns, cash-on-delivery, and low prices reduces hesitation for buyers who may not fully trust online shopping yet.

5. **Drawbacks**

Because Meesho works with many small suppliers, product quality can vary, leading to returns and negative reviews if expectations are not met. The interface can also feel crowded, and discovering high-quality items among many low-priced listings sometimes takes more effort.

6. **Conclusion**

Meesho's design strongly supports low-price, social-driven shopping and has opened e-commerce access to many new users. To improve long-term trust, it needs better quality controls and more refined discovery tools to surface reliable products.

## Tata CLiQ — https://www.tatacliq.com/

1. **Introduction**

Tata CLiQ is a premium e-commerce platform for fashion, electronics, and lifestyle products, aimed at urban shoppers who value branded, authentic goods and a curated catalog.

2. **Brief History**

Launched in 2016 by Tata Unistore, Tata CLiQ entered the Indian online retail

market as Tata Group's digital commerce brand. From the beginning, it focused on an omnichannel model, allowing customers to browse online and use services such as in-store pickup from partner outlets.

3. **Website and App Design**

The site uses clean grid layouts with large, high-quality product photography and a neutral white-and-blue palette to give a premium look. Mega menus and structured filters for brand, size, price, and category make it easy to find specific products, while wish lists and saved carts support planned shopping. The app mirrors the web design and adds mobile-friendly elements such as quick access to offers, order tracking, and secure payment flows.

4. **Role of Design in Success**

A polished, minimal interface reinforces the brand's reputation for trust, which is critical when selling higher-priced fashion and electronics. Clear product information and streamlined checkout journeys help improve conversions for premium items and reduce cart abandonment.

5. **Drawbacks**

Higher average prices compared to some competitors can limit reach among strictly budget shoppers. During high-traffic periods or for certain locations, limited availability and slower delivery can reduce user satisfaction.

6. **Conclusion**

Tata CLiQ's design successfully supports its premium positioning and builds trust for branded purchases. Adding more value options and improving logistics in non-metro regions would make the platform more competitive for a wider user base.

**Reliance Digital — https://www.reliancedigital.in/**

1. **Introduction**

   Reliance Digital is an online and offline retailer focused on electronics, appliances, and gadgets, serving customers who want a broad range of tech products from a known Indian brand.

2. **Brief History**

   It is part of Reliance Retail, which has been expanding its electronics chain since around 2007 through physical stores across India. In recent years, Reliance Digital has strengthened its online store and integrated it with other Reliance platforms to support home delivery and store pickup.

3. **Website and App Design**

   The website emphasizes product detail pages with specification tables, comparison options, and clear pricing, reflecting the needs of tech buyers. A cool color palette with blues and greys gives a technology-oriented feel, while category menus, filters, and search help users quickly narrow down devices by brand, features, or price. The app focuses on quick discovery of popular categories, order tracking, and store locator features for people who want to see products offline.

4. **Role of Design in Success**

   Detailed product information and comparison-friendly layouts help customers make more informed decisions about costly electronics. Integration of online and offline journeys, such as checking in-store availability, supports the omnichannel strategy and can reduce returns and support calls.

5. **Drawbacks**

   The focus on electronics means the site has limited variety in non-tech categories, which reduces cross-selling opportunities. Deep navigation trees and many technical filters can feel complex for less tech-savvy users who just want a simple recommendation.

6. **Conclusion**

Reliance Digital's practical, information-rich design works well for serious electronics buyers who want detail and choice. Simplifying flows for casual users and expanding complementary categories could make the experience even stronger.

## Nykaa — https://www.nykaa.com/

1. **Introduction**

   Nykaa is a leading Indian beauty and personal care platform offering cosmetics, skincare, wellness, and fashion products, mainly targeting style-conscious women and young urban shoppers.

2. **Brief History**

   Nykaa was founded in 2012 by Falguni Nayar and started as an online-only beauty store. Over time it expanded into private labels, fashion, and a large network of offline stores, eventually becoming a listed company.

3. **Website and App Design**

   Nykaa's interface is highly visual, using a pink-and-white palette, product swatches, and editorial banners that make the site feel like a digital beauty magazine. Shade finders, filters by skin type and concern, and video tutorials are integrated into product and category pages to guide users toward the right products. The app adds personalized recommendations, beauty quizzes, and easy reordering of frequently bought items, supporting repeat usage.

4. **Role of Design in Success**

   Content-rich pages, how-to guides, and influencer-style imagery help Nykaa build trust as a beauty expert, not just a seller. These design choices increase time on site, improve discovery of new brands, and encourage users to experiment with more products.

5. **Drawbacks**

Many products are priced at or above typical retail levels, which can feel expensive compared to local cosmetic shops. A strong focus on promotions and influencer content may sometimes make it harder for users to distinguish genuine advice from marketing.

6. **Conclusion**

Nykaa's vibrant, editorial-style design has helped it become one of India's top beauty destinations. Broader focus on affordability and clearer distinction between content and advertising would make the platform more inclusive and transparent.

## Ajio — https://www.ajio.com/

1. **Introduction**

Ajio is a fashion and lifestyle e-commerce platform owned by Reliance Retail, offering clothing, footwear, and accessories from global brands, Indian labels, and its own in-house lines.

2. **Brief History**

Ajio was launched around 2016 as Reliance Retail's dedicated online fashion arm, positioned as a style-forward destination rather than a generic marketplace. It uses Reliance's retail and logistics network to deliver across India and often integrates offers with other Reliance services.

3. **Website and App Design**

The homepage highlights large hero banners for seasonal sales, Ajio's own brands, and curated edits, with category tiles for men, women, kids, indie fashion, and home. A mostly white background with dark text and yellow or bold accent colours makes discounts and offers highly visible, while simple typography keeps price and

size information easy to read. Navigation includes top menus and filters for size, brand, price, and discount, and the app adds bottom tabs for home, categories, bag, and account, along with Wishlist and order-tracking features.

4. **Role of Design in Success**

By clearly highlighting brands along with discounts, Ajio encourages browsing and deal hunting, which suits value-conscious fashion shoppers. Curated collections and edits reduce choice overload and help users quickly find outfits that match current trends or specific occasions.

5. **Drawbacks**

During big sale events, the interface can feel visually crowded because of multiple banners, pop-ups, and offer messages on the same screen. User feedback sometimes mentions delays or customer service issues, showing that the post-purchase experience can lag behind the polished browsing and buying journey.

6. **Conclusion**

Ajio's design balances trend-focused fashion presentation with strong discount signalling, helping it stands out in a crowded fashion e-commerce market. Reducing visual clutter during sales and consistently improving delivery and support would create a smoother, end-to-end user experience.

| Sr. No | Website | URL | Purpose of Website | Things liked in the website | Things disliked in the website | Overall evaluation (Good/Bad) |
|---|---|---|---|---|---|---|
| 1 | Meesho | https://www.meesho.com | Social commerce platform for resellers and budget shoppers | Very low prices, easy reseller model | Product quality varies | Good |

| | | | | | | |
|---|---|---|---|---|---|---|
| 2 | Tata CLiQ | https://www.tatacliq.com | Premium e-commerce for fashion and electronics | Trusted Tata brand, premium products | Higher prices | Good |
| 3 | Reliance Digital | https://www.relianceddigital.in | Electronics and gadgets shopping | Wide electronics range, offline store support | Limited non-electronic categories | Good |
| 4 | Nykaa | https://www.nykaa.com | Beauty, cosmetics, and personal care shopping | Authentic products, beauty-focused UI | Expensive compared to local stores | Good |
| 5 | Ajio | https://www.ajio.com | Fashion and lifestyle shopping platform for clothing, footwear, and accessories. | Modern, stylish UI with good brand variety and discounts. | Can feel crowded during sales, some service/delivery complaints | Good |

## Conclusion:

This report concludes that effective web design is closely tied to each platform's goals, target users, and value proposition across Meesho, Tata CLiQ, Reliance Digital, Nykaa, and Ajio. All five sites use clear navigation and mobile-friendly layouts, but each balances premium branding, price visibility, and information density differently. Meesho and Ajio highlight affordability and discounts, Tata CLiQ and Nykaa focus on premium image and storytelling, while Reliance Digital emphasizes detailed technical information. Common issues include visual clutter during promotions, complexity for new or non-technical users, and gaps in accessibility and after sales experience. Overall, the study shows that planning before coding understanding user needs, tasks, and context is essential to build trust, improve usability, and support long-term business success.
